

PRESS RELEASE

FOR IMMEDIATE RELEASE

GOVERNMENT INCENTIVES FOR THE INSTALLATION OF SOLAR SYSTEMS SINK, BUT CALIFORNIA'S LITE SOLAR SOARS.

Long Beach, CA November 17, 2011 – In response to the pending end to the very valuable government sponsored solar incentive finance program called 1603 treasury grant, Lite Solar recently initiated its new **Life-Boat Solar Financing and Referral Program**. This program which has been a rousing success is aimed at entities with solar projects that are in jeopardy of losing the solar financial incentives scheduled to end 12-31-11 and ultimately the project because of safe harbor rules regarding project progress by the end of the year.

“We may be able to help says R. Sahni, Lite Solar, CEO. We are in a position because of our recent expansion to execute an increasing volume of safe-harbor solar projects at this time. Our Life Boat partners who refer their projects to us will receive referral fees and the satisfaction of having the project completed. In November we signed up 111 projects through this program.”

Long Beach, CA - November 17, 2011 - Lite Solar Corp today announced it has arranged delivery of multiple PV Panel orders nationwide, totaling 100 Megawatts.

“This will allow Lite Solar to satisfy its current contracted orders totaling 70 Megawatts. Additionally, we are very excited that the total expected pipeline for the next 13 months is upward of 175 Megawatts out of our offices in: CA, LA, NJ, OR, HI, MA, and CT. Lite Solar is targeting all industries, especially those with high energy demand charges. And with government incentives schedule to be drastically reduced at years-end our sales are skyrocketing.”.said R Sahni Lite Solar CEO.

One of Lite Solar's new clients had this to say.....

Kookoolan Farms in Oregon will soon be solar powered, and gets a free outbuildings as a bonus!

*I'm thinking every farmer in America wants somebody to come in and build her a free outbuilding, and if it has a 15% savings on every month's power bill and at the end of 30 years you're off the grid [actually the client remains grid tied but they no longer need the grid for power], how could anybody say no? You can count on hearing more about our experience with this program [LITE SOLAR] in coming months. **Kookoolan Farms Newsletter***

ABOUT LITE SOLAR...
